

Call Centre Options

November 2007

Traditional Options

Call centre clusters can be created in groupings of 4/5/6/8 person clusters

Integral cable management ensures easy access to power and data

New ways of working.....

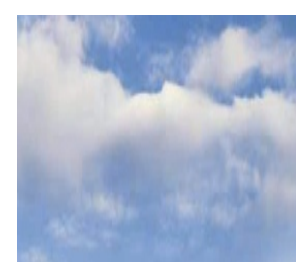

Bench systems allow for easy re-configuration
And can be expanded /contracted to fit more
People per bench position ,whilst breaking
Away from the traditional hub style layout

Variations on a theme.....

Call centre layouts have evolved over a period of time to embrace both new technology (i.e. flat screens) and to try and make the call centre workers feel less segregated. Being an independent company we look at the various systems the market can offer and then propose the ones we feel best will fit your requirements in terms of the following :

Product guarantee

Product Continuity

Re-configurable?

Costs

Project Timescale

Better environment (help to reduce staff turnover)

In addition to desk the other important element is ensuring good Seating to help reduce fatigue and hopefully minimize downtime caused by work related injuries /bad posture etc....

Entry level Synchro mech seating

Mid Range/Ergonomic Task Seating

Mid to high end Seating

Summary

The above selection of products shown above represent an initial suggestion sweep of ideas for your new call centre project. Once we have narrowed down your criteria further we would recommend allowing us to arrange some showroom visits to view both desking and seating options proposed.

Our independent status allows us research the marketplace to ensure we propose the right solution for you. We then work closely with our chosen manufacturing partners to achieve the required project on time and within the agreed budgets set.
